Marsupials get their name from the Latin word 'pouch', because most female marsupials have pouches in which to carry their young. Kangaroos and opossums are two examples of this kind of animal.

Opossums live in North America. The Virginia opossum is the best known. It is grey white in colour and about the size of a house cat. The animal is slow in its movements and its sharp teeth and claws do not provide an effective defence against enemies. Its feet have 'thumbs' that enable the opossum to hold objects in the same way that a human hand does. Its rat like tail is prehensile;

that is it can be used to grasp objects such as a tree branch, from which the opossum is often found suspended. When confronted with danger an opossum suffers so great a shock that it falls into a death like coma. In this state, it can be struck, pinched and poked with sharp objects without responding. As as result, some of its attackers may leave it for dead. When the danger is past, the animal revives and flees this behaviour is known as 'Playing possum'.

The opossum has many natural enemies, including hawks, owls and foxes. Man also hunts the opossum because it is destructive to poultry and eggs. The farmer finds the opossum valuable because it destroys insects and harmful rodents.

(b) If the function of cost $C = Q^3 - 4Q^2 + 20Q$ find the quantity Q at which the average cost (AC) is minimum.

15. (a) Find the rank of $\begin{bmatrix} 2 & 3 & 4 \\ 4 & 6 & 8 \\ 8 & 12 & 16 \end{bmatrix}$

Or

(b) Solve the following equation by Cramer's rule :

$2x + 5y = 45$; $5x + 3y = 46$.

Part - C

$(3 \times 10 = 30)$

Answer any **three** questions.

16. Solve the following equations by using matrices

$4x + 5y = 3, \quad 2x + 3y = 19.$

17. Find the equation of the straight line passing through the point of intersection of the lines $3x + 5y - 5 = 0$ and $2x + 3y + 1 = 0$ and parallel to the line $7x - 2y + 9 = 0$.

18. Differentiate the following w. r. t x

$$y = \frac{5x^3 + 3x^2 - 4x + 5}{\sqrt{x^5}}$$

19. The demand function is $P = (10 - Q)^2$ and the cost function is $C = 70 + 8Q^2$. Calculate the output and price when profit is maximum and also the profit at equilibrium.

20. In a class of 25 students, 12 students have taken economics, 8 have taken economics but not politics. Find the number of students who have taken economics and not politics and those who have taken politics but not economics.
